Lexan* Corrugated sheet
Technical and installation guide

sharing our futures
LEXAN® Corrugated Sheet – An Economical, High-Performance Glazing Material

LEXAN Corrugated sheet is the product of choice for cost-effective, high light-transmitting, long-lasting glazing applications.

LEXAN Corrugated sheet is inexpensive and easy to install with simple woodworking tools. Light-weight and tough, it can be cold-formed to gentle curves or rolled up for easy handling.

Made from LEXAN polycarbonate – a high-performance SABIC engineering thermoplastic – LEXAN Corrugated sheet offers the clarity of glass, transmitting up to 90% of visible light while filtering out harmful ultraviolet light. Its proprietary integral UV resistance is backed by a 10-year limited warranty* against yellowing and loss of light transmission.

Its durability and high impact resistance reduce risk of breakage before, during, and after installation.

Excellent UV Resistance
LEXAN Corrugated sheet is exceptionally resistant to weathering, as shown in Figure 2. Using proprietary SABIC technology, LEXAN Corrugated sheet is manufactured with an integral layer protecting the sheet from the damaging effects of sunlight. It will remain clear and non-yellowing for many years with minimal deterioration. Light transmittance for clear LEXAN Corrugated sheet remains at 90% even through accelerated Q.U.V. tests.

Reduced Ultraviolet Transmission
LEXAN Corrugated sheet transmits a high portion of visible light. It is essentially opaque to ultraviolet light at wavelengths below 385 nanometers. LEXAN Corrugated sheet blocks out the harmful UV light.

High Light Transmission
Clear LEXAN Corrugated sheet transmits visible light as well as glass. Up to 90% of visible light (as measured by ASTM standards and demonstrated in Figure 3) is transmitted through clear LEXAN Corrugated sheet.

LEXAN Corrugated sheet provides the crystal clarity you associate with glass – without the heavy weight, high cost and risk of breakage.

*Details upon request.
High Impact Strength
With 20 times the impact resistance of fiberglass and over 40 times the impact resistance of glass or acrylic (Figure 4), LEXAN Corrugated sheet resists hail, wind, and vandalism. At a thickness of .033", LEXAN Corrugated sheet can withstand over 240 inch-pounds of impact. This equates to a 3/4" hailstone falling at 96 miles per hour! LEXAN Corrugated sheet maintains this superior impact resistance at temperatures ranging from -40°F to 250°F.

Chemically Stable
Although LEXAN Corrugated sheet is unharmed by many chemical substances, it is important to avoid contact with adhesives, paints or solvents which are incompatible with polycarbonate. Chemicals to avoid include benzene, gasoline, acetone, and carbon tetrachloride, among others. Only recommended cleaners should be used to clean LEXAN Corrugated sheet (see "Cleaning" on page 7).

Low Flammability
LEXAN Corrugated sheet meets the requirements of an approved light-transmitting plastic as described by all three model building codes (ICBO, BOCA, and SBCCI). These include ASTM D635, D1929, and D2843. LEXAN Corrugated sheet exhibits superior flammability performance when compared to typical fiber reinforced polyester (FRP) and acrylic sheet materials.

Light Weight
LEXAN Corrugated sheet reduces labor costs because its light weight simplifies handling, transportation, and installation – particularly of long spans in high places. LEXAN Corrugated sheet is only one-quarter the weight of glass on a square-foot basis.

See cleaning, storage, and warranty information on page 7.
Installation Instructions

Sheet Orientation
Install LEXAN Corrugated sheet with the UV-protected side facing OUT (exposed to the weather) as indicated by the sticker affixed to the UV-protected side of each sheet. To facilitate removal, remove sticker immediately after installation. Always position LEXAN Corrugated sheet so that the ribs run vertically.

Bending/Burying
LEXAN Corrugated sheet is sufficiently flexible to allow longitudinal curves with a minimum radius of 158" (Figure 5). Flexing or installing a sheet to the point of buckling can cause rapid deterioration in highly-stressed areas.

Overlaps
On horizontal overlaps, the upper sheet should overlap the lower sheet by 3" to 4" (see Figure 6). Vertical overlap (Figure 7) should be a single corrugation and should be overlapped in the direction of the prevailing wind. Since the finished width of LEXAN Corrugated sheet is 51", the yield from a sheet is 48".

Cutting
LEXAN Corrugated sheet can be cut with a variety of common hand-held and table-mounted equipment. In general, sharp tooling with fine cutting teeth should be used to minimize vibration and chatter. Sheets should be properly supported along the trim line before cutting.

CAUTION: Use appropriate eye and ear protection and exercise caution when operating cutting equipment to protect against injury.

Circular Saws
Use a fine-tooth, hollow ground panel blade with 10–12 teeth per inch.

Saber Saws
Saber saws equipped with a fine-tooth blade can also be used, but proper support is recommended.

Drilling
Drill with a high-speed steel- or carbide-tipped twist drill. Drill holes slightly larger than the fastener to allow for expansion and contraction (e.g., drill a 1/4" hole for a 3/16" screw). Place holes at twice the fastener diameter or 1/2" from the edge of the sheet, whichever is greater.
**Accessories**

A number of different accessories are available to simplify installation of LEXAN Corrugated sheet (see Figure 8). Self-drilling, self-tapping screws with neoprene washers are for aluminum or steel substructures; woodgrip screws are for wood substructures. Self-tapping screws with sharp points should be used with “no-drip” spacers. All-aluminum BulbTite™ rivets with EPDM washers and low clamp-up pressure (80 lbs. or less), such as those made by Olympic Fastening Systems, can be used to join the sheets.

**Sealing**

To seal the pitched-roof ridge from the elements, a ridge cap may be formed from aluminum or other suitable material (see Figure 9). The ridge cap should be sealed with foam weatherseal.

Foamed or wood closures may be used at the ridge peak and gutter to seal the glazing (see Figure 10). Closures should have a profile and be made of materials compatible with LEXAN Corrugated sheet. Use a high-quality, compatible sealant such as silicone rubber to seal holes or overlaps. Sources for closures/weatherseals are listed on Page 7.

---

**NOTE:** Only rust-free fasteners and EDPM or neoprene washers should be used with Lexan Corrugated sheet. It is important to avoid soft PVC washers or other materials that are incompatible with polycarbonate.

**Fig. 8. Available Accessories**

*SABIC Innovative Plastics in no way recommends or warrantees these products.*
The screws or rivets used to fasten LEXAN Corrugated sheet should have neoprene or EPDM washers (see Figure 8). If the attachment point is in the valley, another washer should be placed against the inside surface to separate the sheet from the wood or metal and prevent moisture/condensate droplets from developing, as shown in Figure 11. However, if the sheet is fastened through the top of a ridge corrugation, as in Figures 12 and 13, a "no-drip" pipe strap should be used.

Figure 14 suggests a method of fastening vertical overlapping sheets between purlins with all-aluminum large flange rivets. Rivets should be spaced every 8" to 12" along the overlapping joint.

**Pitched-Roof Applications**

**Rafter and Purlin Supports**

A typical pitched roof application using LEXAN Corrugated sheet is illustrated in Figures 15 and 16. In most pitched roofs, existing rafter and purlin supports will accommodate installation of LEXAN Corrugated sheet.

Spacing of existing rafters is a function of greenhouse design. To obtain 40 lbs./sq.ft. loading, purlin spacing should not exceed 24". It is recommended that a minimum roof pitch of 3:12 be maintained.
Cleaning
Clean LEXAN Corrugated sheet with any mild soap or detergent and warm water, using a soft cloth or sponge. Abrasive cleansers, brushes, or squeegees should not be used.

The following cleaning agents have been found compatible with LEXAN Corrugated sheet. The manufacturer's recommendations and instructions should be followed.

- Joy\(^{1}\)
- Freon T.E.
- Palmolive Liquid\(^{2}\)
- Top Job\(^{1}\)
- VM&P grade Naphtha
- Windex with Ammonia D\(^{3}\)

\(^{1}\)Registered Trademark of Procter & Gamble
\(^{2}\)Registered Trademark of Colgate Palmolive
\(^{3}\)Registered Trademark of Drackett Products Company

Storage
LEXAN Corrugated sheet should be stored on a flat surface out of direct sunlight. Do not stand or place heavy objects on the sheet.

Warranted to Perform
Manufactured by SABIC, the inventor and polycarbonate technology leader for over a quarter-century, LEXAN Corrugated sheet is backed by a 10-year warranty* against yellowing and loss of light transmission.
